

REMARK L^AT_EX Template

Econ-ARK Team

April 7, 2021

Abstract

The REMARK infrastructure permits the construction of reproducible scientific computing results, along with associated documentation.

1 Introduction

Carroll et al. [2018] describe plans for the Econ-ARK toolkit, among which is the development of an infrastructure that will allow for the construction of REMARK repositories whose aim is to make it easy to construct reproducible scientific computational results.

2 Other Parts of the Toolkit

The chief component of the toolkit is the HARK set of tools for solving heterogeneous agent models, particularly of consumption and other financial choices.

Here are some examples produced by the toolkit:
